

Aditya Fauzi

Warehouse Operations Analyst Supervisor

Jakarta, Indonesia adithyun.marv@gmail.com [linkedin.com/in/adityargh](https://www.linkedin.com/in/adityargh) github.com/adityargh

PROFILE

I build the quality and inventory systems that keep quick-commerce fulfilment accurate — turning what goes wrong on the floor into standards that are written down, measured, and repeatable.

Warehouse Operations · Data Analytics · Product Management · Operations Management · Process Improvement

CAREER PATH

ASTRO · QUICK COMMERCE · 4 YRS 1 MO

Feb 2026 – Present
8 mo

Warehouse Operations Analyst Supervisor

Jakarta, ID · Jakarta fulfilment hub · operations analytics

- Supervise warehouse operations analytics for the Jakarta hub, consolidating inbound, storage and outbound activity into 1 reporting view shared across shifts.
- Design indicators against 4 years of floor-level quality and inventory work, so each number maps to a decision someone on shift is able to make.
- Built the outbound control tower that replaced 4 separate stage trackers with 1 shift view, reporting a projected finish rather than a remaining count.
- Added zone occupancy alerting on 3 thresholds per zone and moved absence validation from 1 month-end reconciliation to a same-day flow, so headcount-based indicators stopped being revised weeks after the fact.

Sep 2025 – Feb 2026
6 mo

Dry Inventory Supervisor

Cibitung, West Java, ID · Cibitung dry-goods site · inventory control

- Ran dry-inventory control at the Cibitung site across a 6-month assignment covering cycle counting, stock adjustment and discrepancy escalation.
- Set the counting routine to run daily rather than as 1 month-end event, so variance surfaces while the cause is still traceable.

Jan 2025 – Oct 2025
10 mo

Quality Management Officer

Jakarta, ID · Site-wide quality governance

- Held site-wide quality governance for 10 months — standard documentation, internal audit readiness and corrective-action follow-through.
- Maintained 1 controlled set of quality documents as the reference for every shift, in place of per-team interpretation of the same standard.
- Built the EX analysis system — stock sorted into 4 days-to-expiry bands feeding 1 weekly action list — and a frozen-inbound queue board across 3 receiving lanes measured against the cold-chain window.

Dec 2022 – Dec 2024
2 yrs 1 mo

Quality Assurance Team Leader

Jakarta, ID · QA team · inspection and non-conformance

- Led quality assurance for 25 consecutive months, owning inspection standards, non-conformance handling and corrective action across shifts.
- Trained incoming QA staff against 1 written standard so inspection outcomes stay comparable regardless of who is on shift.
- Put 1 standard rate and a short cause-code list on relabelling work that had 0 prior measurement, so the rework could be planned and its recurring sources challenged upstream.

Sep 2022 – Nov 2022
3 mo

Quality Assurance Staff

Jakarta, ID · Line-level product and process inspection

- Inspected product and process against standard across a 3-month starting assignment, building the failure record that later set priorities.

CORE CAPABILITIES

Warehouse Operations: Inventory control & cycle counting, Dry goods storage & slotting, Inbound to outbound flow, WMS operation

Process Improvement: Quality management system, Root cause analysis, SOP design & standardisation, Corrective & preventive action

Data Analytics: Operational reporting, Metric & KPI design, Spreadsheet modelling, Data quality control

Operations Management: Shift team leadership, Training & onboarding, Capacity & coverage planning, Business strategy

Product Management: Requirement discovery, Ops tooling & workflow design, Stakeholder alignment, Backlog prioritisation

EDUCATION

Bachelor of Information Systems — Universitas Terbuka (2020 – 2025)

Vocational Diploma, Ship Machinery Installation — SMK Tanjung Priok 1 (2008 – 2011)
